SUMMARY

Final-year B.Tech CSE (Minor: Robotics) student graduating in 2027, who designs in Figma and builds what she designs. I take a product from user flow and screen states to a deployed React app with a backend, and I have shipped live web apps, Windows desktop apps and 3 merged open-source PRs.

EDUCATION

- B.Tech – Computer Science & Engineering (Minor: Robotics) | Mangalam College of Engineering, Ettumanoor | KTU | 2023–2027 | CGPA 8.02 (no active backlogs)
- Higher Secondary (HSE) | Marthoma Higher Secondary School, Pathanamthitta | Kerala Board | 2021–2023 | 96.91%
- SSLC (10th) | Marthoma Higher Secondary School, Pathanamthitta | Kerala Board | 2019–2021 | 100%

SKILLS

Languages: Python, C, JavaScript

Design: Figma, Framer, Wireframing, Prototyping, User Flows, Component Design, Adobe Photoshop

Frontend: JavaScript (ES6+), React.js, HTML5, CSS3, Tailwind CSS, Bootstrap, Framer Motion, Electron.js

Backend & APIs: Django, Supabase, MongoDB, Node.js, Express.js, SQL, REST APIs, Groq LLM API, Notion API

Developer Tools: Git, GitHub, VS Code, Jupyter Notebook, PyCharm

Core CS: OOP, DSA, DBMS, Operating Systems, Computer Networks

OPEN-SOURCE

- **GirlScript Summer of Code 2026 | Remote - Open-Source Contributor** - Contributed 3 merged PRs, including a browser port of Pomodoro With Miu and responsiveness/navigation fixes in DailyForge.

PROJECTS

Memory Palace | Live · GitHub

React.js, Tailwind CSS, Framer Motion, Supabase

- Designed the full user flow in Figma, then built it with React, Tailwind and Framer Motion: memories are written as letters and kept behind animated doors in a themed palace. It is live, and 17 people have registered. In a test with 7 people, 5 used it without any help.
- Set up Supabase Row-Level Security so each user's entries are isolated from every other user's data.

LifePilot - AI Task Planner | GitHub

JavaScript, Node.js, Express.js, Groq LLM API, Notion API

- Built a Node and Express backend that sends a user's goal to the Groq AI API and returns a day-by-day plan with priorities and deadlines. Added plan formatting and a Notion sync, so finished plans appear in the user's own Notion workspace.
- In testing, all 10 goals returned valid plans, with the level of detail matching how detailed the goal was.

Pomodoro With Miu - Desktop App | GitHub

Electron.js, HTML, CSS, JavaScript

- Designed the cat illustrations and five screen states in Figma, where the cat's mood and text change with work and break time, and built them as an Electron app with timed work and break sessions.
- Packaged it as a Windows installer (6 downloads so far); a browser port was also merged through open source (GSSoC 2026).

PyroX - AI-Driven Pyrolysis Management System | Final Year Project - **In Development**

- Designing a platform that collects plastic and biomass waste and turns it into fuel, with pickup coordination, a plant locator and fuel production tracking.
- Added carbon-savings calculation, alerts and an EcoCredit rewards system.

RideX - Shared Auto-Rickshaw & Bus Tracking Platform | Team Mini Project

React.js, Node.js, JavaScript, GPS/Location Services

- Built a web platform that matches people travelling to the same destination, so they can share an auto-rickshaw and split the cost.
- Added live tracking of private bus routes that flags delays.

TRAINING

- **UI/UX Designing — TekLearn | 17 Dec 2024 – 23 Dec 2024** - Week-long program covering interface design and AI-assisted UX. Designed a prototype in Figma for a Pomodoro App.
- **Full Stack Development — TekLearn | 15 Jun 2025 – 25 Feb 2026** - Trained in JavaScript, React, Node.js and REST APIs over 8 months. Built 10 small projects, including a Mini CMS Blog and Personal Portfolio, covering frontend, backend and database.
- **Python with Django — Faith Infosys | 16 Jun 2026 – 22 Jun 2026** - Week-long Django program. Built Clean City Connect, a web app for reporting waste issues and coordinating community cleanup, using Python, Django and a Bootstrap template.

CERTIFICATIONS

- Code In Place 2025 - Stanford University
- McKinsey.org Forward Program - McKinsey & Company
- Python for Data Science - NPTEL
- Ethical Hacking - NPTEL
- Introduction to Cybersecurity - CISCO
- Google AI Essentials - Google

WORKSHOPS & PARTICIPATIONS

- Wheeled Mobile Robots - NPTEL
- Cybersecurity Workshop - Hexinox
- Augmented Reality Workshop – IEEE
- DSArena (GeeksforGeeks X IEEE SB SJCET) 2025 Participant - IEEE

HACKATHONS

- INNOVERSE 2025 - Student Startup Ideathon – Mangalam College of Engineering, 2025 – **SPECIAL MENTION**
- NASA International Space Apps Challenge 2024 - Galactic Problem Solver – PARTICIPANT
- Young Innovators Programme (YIP) 8.0 and 9.0 – K-DISC, Government of Kerala, 2025 and 2026 – PARTICIPANT

SOFT SKILLS

Problem-Solving | Teamwork | Communication | Adaptability | Time Management | Leadership | Organization | Attention to Detail | Creativity
